

SEXPLORATIONS

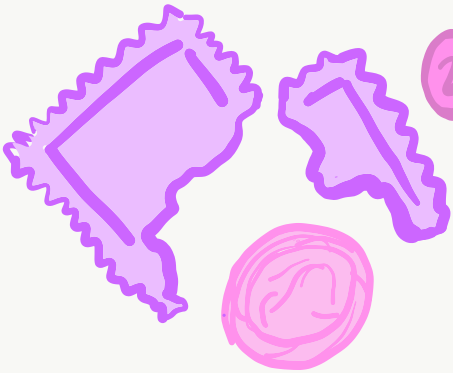

ISSUE
#1

How External-To: Condoms

① Make sure the condom isn't **damaged or expired** by examining the package for damage and checking the date.

② Open the condom **using your hands**-- don't use anything sharp like teeth or scissors.

④ Roll the condom down-- it should be easy. **If it's difficult, the condom might be going the wrong direction.**

⑤ Apply **additional condom compatible lube (water/silicone base)** and you're ready for anal, vaginal or oral sex.

⑦ Dispose of the condom in the garbage (**please don't try to flush condoms**-- unless you're looking to have an awkward convo with a plumber).

⑥ When you're finished, the wearer should **hold the condom at its base and withdraw.**

Protect your condoms from damage by storing them in a **cool, dark, dry place.**

If any of these steps go wrong, start over with a new condom.
